

Here comes the revolution

Staff Absence Solutions offers modern and sensitive treatments that treat the causes of staff absenteeism, helping every one of its patients get back to work

Absenteeism averages 3.75 per cent and costs Toc's around £187 million per annum in lost time', equating to more than £3,000 per employee'.

With health and wellbeing high on everybody's agenda, it may surprise many to know that the average employee wellbeing spend is only around £86 per annum'. Is it time to review the current approach and redefine efforts that will improve employee wellbeing?

Staff Absence Solutions is an independent, confidential company that assists its clients in the management of absenteeism. The company works closely with any existing health and wellness service providers, bringing a modern approach to treating complex conditions.

With immediate access to support, and leading-edge therapies not available on the NHS, each patient receives a bespoke treatment package that addresses every aspects of their condition. Staff Absence Solutions puts no limit on the number of appointments, therapists or therapies, just a promise that it will assist each person back to normal life.

Many companies may feel that its existing service providers are

sufficient; Staff Absence Solutions is an additional resource that assists in cases where a traditional approach has been unsuccessful.

Furthermore, the company only charges for each referral, reducing lost time, management effort and fiscal loss. This is not an additional spend, but an additional saving. Its clients decide when intervention is cost-effective.

RSSB

Staff Absence Solutions is an expert in the field of fatality, suicide and trauma rehabilitation; its unique approach delivers results time after time, instilling best practice into all of its clients. In recognition of its innovative approach, it's currently assisting the RSSB in a project to modernise the rail industry's approach to the management of absenteeism and presenteeism.

Staff Absence Solutions Limited continues in its quest to radically change the corporate approach to absenteeism, continually striving to identify and implement new therapies into its service provision. It invests heavily in its team of therapists to extend the boundaries of possibility and practicality.

Modern methods

It's no longer acceptable to offer lengthy waiting lists accompanied by outdated, inappropriate therapies that yield poor results. From a psychological perspective, the traditional approach of CBT (cognitive behaviour therapy)/counselling is often ineffective, resulting in long-term reliance on prescriptive drugs.

Therapies such as Modern Clinical Hypnotherapy, EFT (Emotional Freedom Technique), EMDR (Eye Movement Desensitisation and Reprogramming) and Matrix Re-imprinting are among the leading edge techniques used to deliver a fluid, drug-free, expedient alternative – with proven, effective results.

Physiologically, the traditional approach is also outdated. The use of modern therapies, such as NKT (NeuroKinetic Therapy), AiM (Anatomy in Motion) and P-DTR (Proprioceptive Deep Tendon Reflex), has taken treatment of musculo-skeletal conditions to a new level, keeping the reliance on invasive surgery to a minimum.

The company

Staff Absence Solutions continues to grow throughout the UK and is currently exploring fresh opportunities overseas; where there is a rail industry, there is a growing need for the innovative service that it provides.

Its aims and objectives are to revolutionise the corporate approach to absenteeism, and to challenge the use of traditional therapies and accepted periods of absence experienced by organisations across the UK.

For those looking to update their health and wellbeing provision, contact Staff Absence Solutions.
